The Preparation and Care of a Lawn

A well cared for lawn adds more than any other one thing to the attractiveness of the home grounds and not only this, it increases the value of property by much more than the mere expense of securing the lawn. There are a few simple rules which, if followed consistently, will be certain to bring good results.

The ground must first be thoroughly prepared by draining, if necessary, and spade or plow to the depth of 6 to 12 inches, according to the nature of the soil, applying a liberal quantity of well decomposed manure, bone meal or pulverized sheep manure, the latter we recommend as being lasting in effect, not liable to burn the grass and free from weeds. Clean the ground

thoroughly and rake perfectly smooth and level, as much of the success depends upon this part of the preparation. The seed should be sown on a calm day, that it may be applied evenly, and at the rate of seventy pounds per acre, or one pound is sufficient for 600 square feet. After the seed is sown the ground should be rolled with a light roller or evenly tamped with the back of a spade. The plot should be mowed every ten days from May until September, using a sharp scythe in preference to a mower until a close turf is formed. Frequent mowing and rolling is necessary to maintain a close, even turf. April and September are the best months for sowing lawn seed.

Park Lawn Grass Mixture

In our lawn mixture we use only the highest quality; extra clean seed and free from weed seeds which abound in inferior grades. We use only the choicest low-growing grasses, and a lawn produced from our seeds will maintain a rich, dark velvety appearance and a permanent sod. One pound will sow 600 square feet. $\frac{1}{2}$ lb. 35c., 1 lb. 60c., 2 $\frac{1}{2}$ lbs. \$1.25, 5 lbs. \$2.25, 100 lbs. \$40.00.

Shady Nook Grass Mixture

A special mixture of grasses adapted to growing under trees and in shady places where it is quite difficult to produce a satisfactory growth. $\frac{1}{2}$ lb. 40c., 1 lb. 75c., 2 $\frac{1}{2}$ lbs. \$1.50, 5 lbs. \$2.75, 20 lbs. \$10.00.

A well kept Vegetable Garden is an attractive feature of the home grounds

ORDER EARLY. Our customers would find it decidedly to their advantage to procure their seeds early as possible after the receipt of catalogue, thus avoiding the rush of the planting season, and it frequently happens that some stock from our own growing contracts, are exhausted early and replaced by the best we can secure in the open market.

SELECTION OF STOCK. We use every precaution in securing our stock and place our contracts, both in this country and Europe, only with old, reliable growers who have long standing records of producing the best in their lines. Conditions have changed very rapidly in the production of seeds, and this is particularly true of many lines of **Flower Seeds**. Some of our regular growers extending their list of items produced and owing to their persistent labor in selection and closer breeding, have improved strains to a degree that is very noticeable.

IN ADDITION to our very complete collection of **Vegetable** and **Flower** and **Lawn Seeds**, we stock Flowering Bulbs for Spring and Fall planting and many Fall Bulbs in pots and bowls prepared ready for blooming. Bulb Bowls, Pebbles and Hyacinth Glasses. Flower Pots we stock almost unlimited assortment of sizes and styles. Plant Stakes and Labels. Insecticides and Fertilizers. Poultry Supplies: Remedies Hoppers, Fountains, Leg Bands, Nest Eggs, Chicken Feeds, etc. Sergeant's Dog Remedies, Champion Dog and Puppy Biscuits. Bird Seeds. Sweet Peas

INOCULATE THIS SEED WITH MULFORD CULTURE

INOCULATE THIS SEED WITH MULFORD CULTURE

During the last ten years great improvement has been made in size and beauty of this popular flower and the development is still in progress. New colors, forms and types are being brought out by the Sweet Pea growers every year, but we will confine our list here to the best tried sorts, and we feel confident that we can take care of the wants of our customers with the stock we carry.

The proper time to spade garden for Sweet Peas is in the Fall, as the longer the soil remains in the rough state the better. Give a liberal dressing of well rotted stable manure, ground bone and a dusting of lime. Spade to a depth of 6 or 8 inches and allow soil to remain in the rough without chopping down. When sowing seed see that the soil is firmly trodden down, as Sweet Peas require not only a deep soil but a firm one. Seed should always be sown early in Spring 1 inch deep and when plants are well up thin to 2 to 4 inches apart. Many thin 6 to 9 inches apart and when 3 or 4 inches high pinch out tops to start branching. Support should be given early before plants get twisted. When hot, dry weather begins, see that the plants are well mulched and well watered. Look out for green aphid and keep clean by spraying with solution of tobacco extract. Care must be taken to keep flowers picked, as the forming of seed pods will stop blooming.

In giving a list of the Sweet Peas we have confined ourselves to those sorts that have been tested as the strongest growers, and from the various shades and colors have selected those which are the clearest and the truest.

Giant Spencer—Waved Varieties

Spencer Sweet Peas are the largest and most beautiful of all known Sweet Peas, the individual flowers measuring frequently 2 to 2½ inches across; they are also remarkable for their profuseness and continuous bloom. On strong stems 9 to 12 inches long, the beautiful flowers are borne three to four on a stem. The standards are open, well rounded and exquisitely waved and often serrated.

8-inch cut, \$10.00.

"Victory" Ball Bearing Lawn Mower

The ball bearing in lawn mowers is the latest and probably the greatest improvement in their manufacture. The "Victory" is constructed with 10-inch skeleton rim driving wheels, 6½-inch cutting cylinder with five knives. Is a strong and powerful, easy running mower.

For those who mow their lawns frequently we advise the use of five blade machines, as they leave the lawn in a very smooth condition. 16-inch \$20.00, 18-inch, \$22.00, 20-inch \$24.00.

Roller Lawn and Golf Mowers

On lawns where exceptionally fine cutting is a necessity, there are no mowers equal to these. They cut smoothly, effectually doing away with that wavy appearance so often seen on a freshly cut lawn. They will also roll down a new lawn and protect it against upheavals caused by dampness, ants and other insects. These are the only mowers that will cut borders properly and without danger of cutting the sod. Price, 18-inch, \$31.00.

Derby Lawn Mower

A Superior, Medium-Priced Machine.

This mower is built to accommodate those who have only limited city lots to mow. And while of lighter construction than our "Victory," in quality of materials we consider it equal. 14-inch, \$15.00; 16-inch, \$16.50; 18-inch, \$18.00.

Mulford Cultures
FOR LEGUMES

Small Cost Large Returns Easy to Use No Labor Expense

Mulford Cultures contain pure, tested strains of active, vigorous nitrogen-fixing bacteria, for inoculating seeds of legumes or soil.

Legumes offer the best known means of maintaining soil fertility and rejuvenating over-cropped and wornout fields. They add both humus and nitrogen to your soil and thus increase your yield of wheat and other non-legume crops.

The U. S. Department of Agriculture and many State Agricultural Experiment Stations recommend inoculation of legumes with nitrogen-fixing bacteria to induce a prompt "catch" and increase your yield.

Mulford Cultures are prepared for

Alfalfa (Lucerne)	Red Clover	Cow Peas	Vetch	Garden Peas	Lespedeza
Crimson Clover	Alsike Clover	Soy Beans	Velvet Beans	Garden Beans	Beggar Weed
Sweet Clover	Bur Clover	Peanuts	Sweet Peas	Lima Beans	and Others

Always specify on your order what crop you want to inoculate, as there is a different strain of bacteria for each legume.
